Portion - 4-1

Calculation for prediction on the next action value

Constants		
Value For Random # 1	Value For Random # 2	
4,32	10,97	

References			
Float Random Value	Int Random Value	Condition Value	Action Base Value
7,30	4	0,05	20,00
3,70	2	0,05	21,00
5,50	15	0,50	22,00
7,90	1	0,50	21,92
1,30	2	0,50	22,00
3,60	15	0,50	21,38

Weekdays			
Prediction	Today	Yesterday	Before Yesterday
25,00	24,00	25,00	26,00
23,00	22,00	23,00	24,00
36,00	35,00	36,00	37,00
22,33	21,00	23,00	23,00
23,00	22,00	23,00	24,00
36,00	35,00	36,00	37,00
27,56	26,50	27,67	28,5

average

average down/up reference condition

behavior

current - next

Portion - 4-1

last - previous

this formula is not need this throws the same previous result

but in different order

average

average down/up reference condition

behavior
